

Replacement blades and knives for Kett Power Shears.

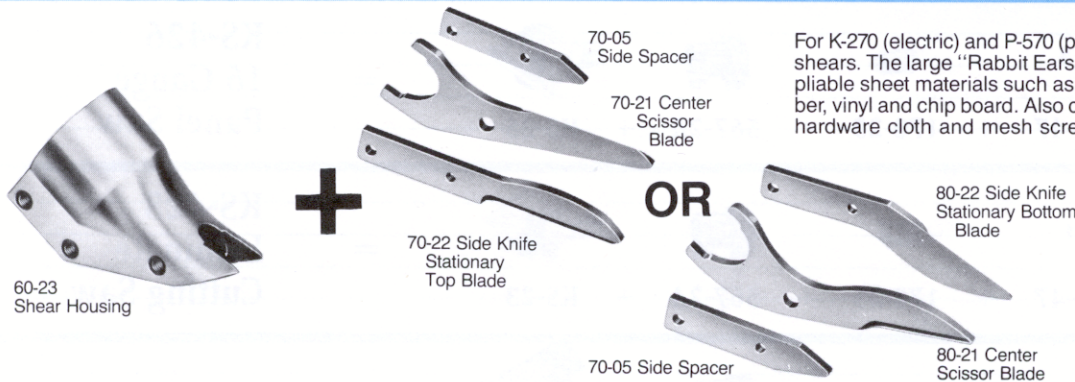

For K-200 (electric) and P-500 (pneumatic) model power shears. Cut metal up to 18 gauge, and plastic or other sheet materials up to 3/32" thick. Can cut 7/32" wide straight or eccentric configurations in round, flat, or curved surfaces.

ALTERNATE CENTER BLADES

60-21C contour cutting blade cuts sharper radii than standard blades.

60-21HS housing and siding blade, cuts foam-backed siding and building materials.

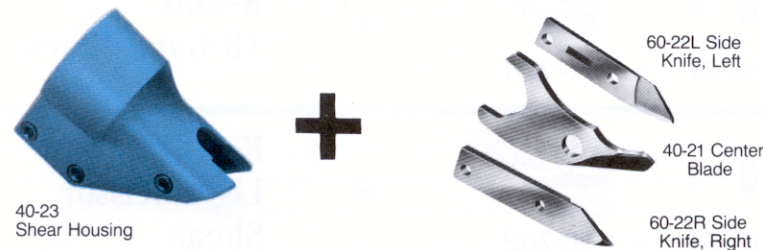

For K-270 (electric) and P-570 (pneumatic) stationary top blade model shears. The large "Rabbit Ears" blades are ideally suited for cutting pliable sheet materials such as carpet underlay, linoleum, foam rubber, vinyl and chip board. Also can cut heavy foil, light insulated wire, hardware cloth and mesh screening with ease.

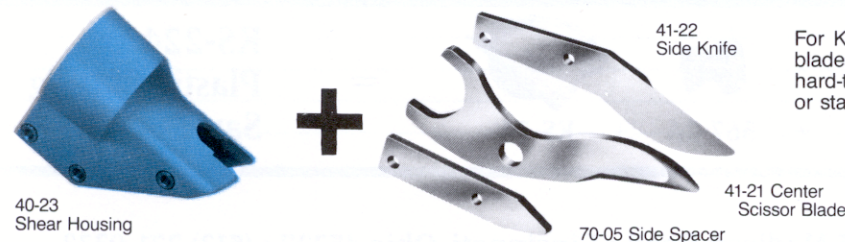

For K-280 (electric) and P-580 (pneumatic) stationary bottom blade model shears. Same high quality cutting capabilities as the K-270 and P-570 blades.

For K-290 Terminal Strip Shear. "Duck bill" blades cut quickly through light gauge wire.

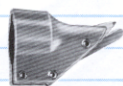

For KE-440, E-140 (electric) and P-540 (pneumatic) model heavy duty power shears. Blades cut mild steel up to 14 gauge, producing a uniform curl of waste material which absorbs the distortion of the 7/32" wide cut. Will make straight or curved cuts without bending or burring the metal; no need to file or straighten the edge after cutting.

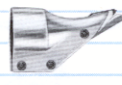

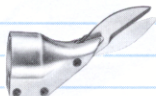

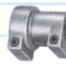

For KE-441, E-141 (electric) and P-541 (pneumatic) model shears. blades enable fast, accurate cutting of steel siding. Also handle other hard-to-cut metal, plastic and rubber sheet materials without fouling or stalling the power unit. Blades made from finest A-2 tool steel.

Combine Kett's power unit with the cutting head of your choice, and match the tool to your cutting task. A rugged 120 volt AC, 4.5 amp motor has the full power to drive all of Kett's saw and shear cutting heads. Double-insulated, the motor operates at 2500 RPM.

All powered by variable-speed electric motor
